

Viticulture

These vineyards are located in the sub-region of Silgueiros at an altitude between 350-400 meters. This grape variety is recognised for having smooth leaves, a short distance between the knots and a bright green tone. The vine is grown within a program of integrated protection: the use of herbicides is forbidden. Infestation control is carried out through soil movement. Grape-picking is done by hand, caste by caste, when the ideal point of ripeness is reached, normally at the second fortnight of September. The harvest is collected in small 10 kg boxes.

Systematisation

Vertical cane with 2 fixed wires and 2 moveable wires, a density of 6060 plants pruned in double guyot. Exposure: North/South Soil: Sandy with a granite base Grape Variety: 100% Jaen Age: 16 years Yield: 35 hl hectare

Winemaking

These wines are obtained after fermentation at a controlled temperature in order to preserve their aromatic elegance, in big wooden barrels and stainless steel tanks, for 20 days.

The wine is made by malolactic fermentation in barrels of French oak and has a subsequent maturing period of 18 months in order to potentiate its structure and complexity.

Production: : 7.000 bottles

Physical-Chemical characteristics

Alcohol: 14,3% Total Acidity: 6,31 g/dm3 Volatile Acidity: 0,7 g/dm3 pH: 3,76

Tasting Notes

Notes of pine and pine needles, forest, very expressive wild berries. Dense mouth of polished tannins. Compact and appealing finish.
